

HASHMAP |

"The more we do the more
we can do."

~ William Hazlitt

THE BRIGHT
PROPS
.com

Class will start at 7:10 AM

Today's Agenda

- * Understanding behind the scenes of HashMap

- Questions {
- * Closest Duplicates
 - * Longest chain of consecutive elements
 - * Longest subarray with sum = 0

Hash Map → Array of Linked Lists

↳ Data structure which stores the info in the key-value pair

01. Search for an ele

02. Insert an ele

03. Remove an ele

04. Size

05. Update an ele

$O(1)$ avg

• Key - Value

1 - 500

2 - 250

7 → 1000

arr[N]

indices = 0 to n-1

0	500	250	0	0	0	0	1000
0	1	2	3	4	5	6	7

Simplest Hash Map

Q Store frequency of all elements

$A = \{ 3 \ 2 \ 1 \ 2 \ 5 \ 1 \ 5 \}$
0 1 2 3 4 5 6

freq =

0	2	2	1	0	2
---	---	---	---	---	---

0 1 2 3 4 5

freq = max + 1
size

```
for (i = 0; i < n; i++) {  
    |   freq[Arr[i]]++  
    |  
    3
```

TC = $O(n)$

SC = $O(\text{Range of ele})$

$i \rightarrow \text{key}$

freq[i] \rightarrow frequency of i (value)

If range of $A[i]$ is very large \rightarrow Say $A[i] = 10^9$

\hookrightarrow Can we create a freq arr? No

(Memory Limit Exceeded)

(MLE)

Array size = 10^5

Limited memory = M

Can we somehow limit the range of our elements. ? \rightarrow Modulus operator

Hash function

Provides the key in our memory limit

$$h(x) = x \% M$$

original key

$$h(x) = \underbrace{\text{key}}$$

New key which is

in range of 0 to $m-1$

$$Arr = \{10, 20, 30, 27\} \quad M=17$$

$$h(x) = x \% 17$$

$$h(x) = 10 \% 17 = 10$$

$$h(x) = 20 \% 17 = 3$$

$$h(x) = 30 \% 17 = 13$$

$$h(x) = 27 \% 17 = 10$$

freq[10]

freq[3]

freq[13]

freq[10]

collision

Is it possible to avoid collision?

(limited memory) \longrightarrow No

(pigeon hole principle)

Pigeon hole principle \longrightarrow N holes & $(N+1)$ pigeon

& you want every pigeon to live in hole

\longrightarrow at least one hole having more than 1 pigeon

Chaining → Handle the collision

Instead of storing the freq of $A[i]$,

store a list containing $(A[i], \text{freq}[A[i]])$

$A[] = \{3, 6, 4, 1, 2, 10, 2, 4, 6, 1\}$

$M = 4$

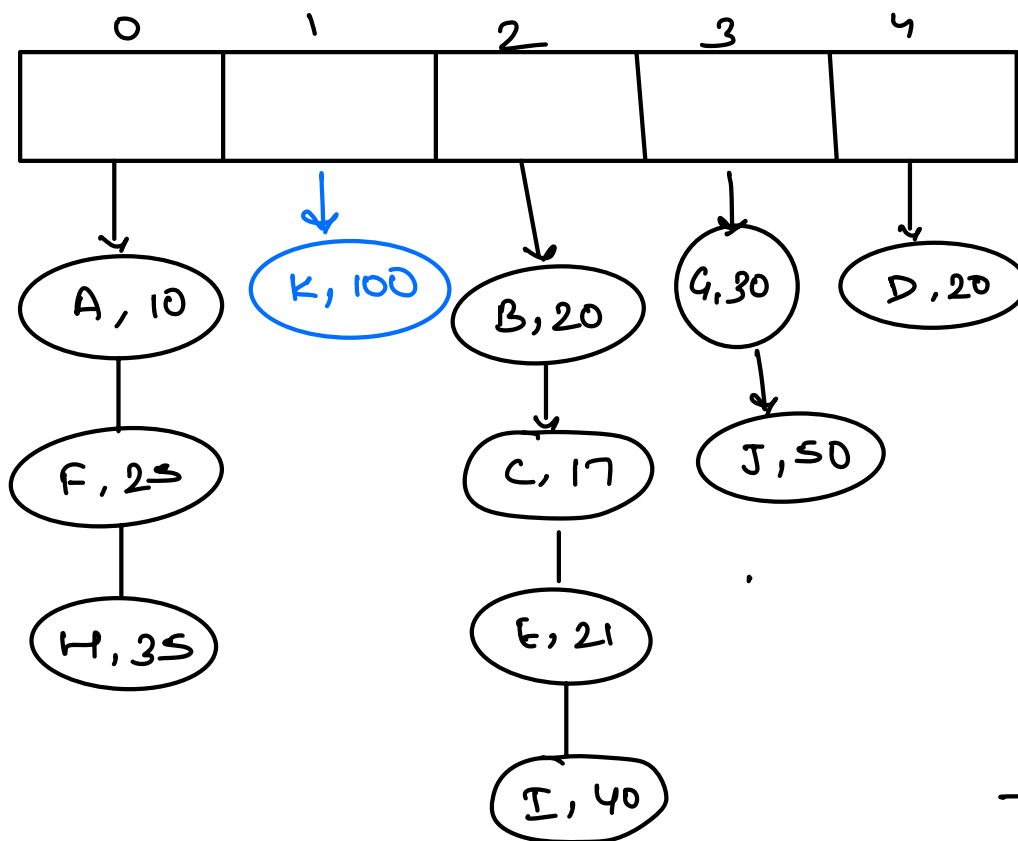

Cons of chaining \rightarrow $\overset{TC}{O(1)}$ \longrightarrow $\overset{Worst}{O(n)}$

90% 10%

Example = Population Map

Maintain the size of Linked List = 2

\hookrightarrow loading factor

Given \downarrow

A - 10

B - 20

C - 17

D = 20

E = 21

F = 25

G = 30

H = 35

\rightarrow I = 40

J = 50

K = 100

Average size of a LL = $\frac{\text{No. of nodes}}{\text{No. of LL (size of array)}}$

$$= \frac{10}{5} = 2$$

Avg size of a LL = $\frac{11}{5} > 2$

Rehashing

Avg size of LL = $\frac{11}{10} = 1.1 < 2$

TC = O(1)

8:13 → 8:23 AM

Closest duplicates

Q → Given an integer array of size N . Find pair (i, j) such that $j > i$ and $A[i] = A[j]$ & $j - i$ is minimum

arr[] =

2	4	5	6	-1	2	5	4	3	7	3	2
0	1	2	3	4	5	6	7	8	9	10	11

Brute force → Consider all pairs
→ Find the duplicate pairs in all pairs, find the distance & update your ans accordingly

$$TC = O(n^2)$$

X → Sorting

X → Binary search

$$ans = \{ x \dots x \dots x \dots x \}$$

Observation → We only need the closest value of x to update your ans

$$arr = \left\{ \frac{x}{0} \xrightarrow{7} \frac{x}{7} \xrightarrow{5} \frac{x}{12} \xrightarrow{10} \frac{x}{22} \right\}$$

$x = 0, 7, 12$

$$ans = \infty$$

$$ans = \min(\infty, 7 - 0) = 7$$

$$ans = \min(7, 12 - 7) = 5$$

$$ans = \text{Math.min}(5, 22 - 12) = 5$$

Conclusion → We need to keep track of last occurrence of the values

$$arr = \left\{ \begin{matrix} 1 & 2 & 3 & 6 & 2 & 1 \\ 0 & 1 & 2 & 3 & 4 & 5 \end{matrix} \right\}$$

↑ ↑
 (pointing to indices 4 and 5)

Hashmap
key - value

1	—	0
2	—	4
3	—	2
6	—	3

$$key = arr[i]$$

$$value = index$$

$$ans = \infty$$

$$ans = \min(\infty, 4 - 1) = 3$$

$$ans = \min(3, 5 - 0) = 3$$

Pseudocode →

```
HashMap<Integer, Integer> map = new HashMap<>();
int ans = Integer.MIN_VALUE;
```

```
for (i = 0; i < n; i++) {
```

```
    int k = arr[i]
```

```
    if (map.containsKey(k) == false) {
```

```
        map.put(k, i);
```

```
    }
```

```
    else {
```

```
        int lo = map.get(k);
```

```
        ans = Math.min(ans, i - lo);
```

```
        map.put(k, i);
```

```
    }
```

```
}
```

TC = $O(n)$
SC = $O(n)$

02. Given an array of size N. Find the length of longest sequence of consecutive elements.

Eg:- { 100 4 3 6 10 20 11 5 101 }

<u>Sequence</u>	=	100, 101	→	2
		3, 4, 5, 6	→	4
		10, 11	→	2
		20	→	1

$$\text{arr} = \begin{matrix} \{-1 & 8 & 2 & 3 & 7 & 1 & 4 & 9\} \\ 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 \end{matrix}$$

$$\begin{aligned} \text{Sequence of consecutive ele} &= 1 \ 2 \ 3 \ 4 = 4 \\ &= 7 \ 8 \ 9 = 3 \\ &= -1 = 1 \end{aligned}$$

Idea 1 \rightarrow Sort the array

$$\text{arr} = \{-1\} \{1 \ 2 \ 3 \ 4\} \{7 \ 8 \ 9\} \quad \boxed{\text{Ans} = 4}$$

1 4 3

$$\text{TC} = O(n \log n)$$

$$\text{SC} = O(1)$$

Idea 2 \rightarrow

$$\text{arr} = \{-1 \ 8 \ 2 \ 3 \ 7 \ 1 \ 4 \ 9\}$$

0 1 2 3 4 5 6 7

$$\text{HashSet} = \{-1, 8, 2, 3, 7, 1, 4, 9\}$$

$$\begin{aligned} \text{TC} &= O(n^2) \\ \text{SC} &= O(n) \end{aligned}$$

Time complexity Analysis

arr = { 1 2 3 4 5 }

set = { 1 2 3 4 5 }

1 → 2 → 3 → 4 → 5	Len 5	Total Iteration 5 (N)
2 → 3 → 4 → 5	4	4 (N-1)
3 → 4 → 5	3	3 (N-2)
4 → 5	2	2 ⋮
5	1	1 1

$$TC = \frac{n(n+1)}{2} \approx O(n^2)$$

x

$x-1$

Obs \rightarrow If $x-1$ is present, then
 x can't be the starting point

arr = $\{-1, 8, 2, 3, 7, 1, 4, 9\}$
0 1 2 3 4 5 6 7

set = $\{-1, 8, 2, 3, 7, 1, 4, 9\}$

length
1

-1

8

2

3

7 \rightarrow 8 \rightarrow 9

3

1 \rightarrow 2 \rightarrow 3 \rightarrow 4

4

4

9

$$TC = O(2n) \\ = O(n)$$

Pseudocode

HashSet<Integer> set = new HashSet();

for (i=0; i<n; i++) { set.add(arr[i]);

for (i=0; i<n; i++) {

Iterate on hashset
Google check

int x = arr[i]

Value from hashset

if (set.contains(x-1) == false)

chain = 1

y = x + 1

while (set.contains(y)) {

chain++;

y++;

ans = Math.max(ans, chain);

}

}

return ans;

arr = { 6, 6, 6, 6, 6, 6, 7, 8, 9 }

as

set = { 6, 7, 8, 9 }

↓

keys

6 → 7 → 8 → 9 = 4

6 → 7 → 8 → 9 = 4

6 → 7 → 8 → 9 = 4

$$\textcircled{6} \rightarrow \textcircled{7} \rightarrow \textcircled{8} \rightarrow \textcircled{9} = 4$$

$$\textcircled{6} \rightarrow \textcircled{7} \rightarrow \textcircled{8} \rightarrow \textcircled{9} = 4$$

Q Given an array of Integers. Find the length of longest subarray with sum=0

$$\text{arr} \rightarrow \left\{ \begin{array}{cccccccccccc} 2 & 2 & 1 & -3 & 4 & 3 & 1 & -8 & 6 & -2 & 1 \\ \textcolor{blue}{0} & \textcolor{blue}{1} & \textcolor{blue}{2} & \textcolor{blue}{3} & \textcolor{blue}{4} & \textcolor{blue}{5} & \textcolor{blue}{6} & \textcolor{blue}{7} & \textcolor{blue}{8} & \textcolor{blue}{9} & \textcolor{blue}{10} \end{array} \right\}$$

$$\text{prefix sum} \rightarrow \left\{ 2 \quad 4 \quad 5 \quad \textcircled{2} \quad 6 \quad 9 \quad 10 \quad \textcircled{2} \quad 8 \quad 6 \quad 7 \right\}$$

Elements are repeating in psum

↳ we have the subarray sum=0

Insert the subarray sum (psum) in hm

& if it comes again → update the ans

but don't update the value of last occurrence

Code → {TODO}
